

Hep_vO

Sanitary waste valve

Hep_vO is used instead of a P-Trap to protect the living space from foul odors from the grey water tank, black water tank or campground sewer system.

Each Hep_vO is approved to protect one sanitary fixture, which can be a Lavatory, Shower, Bathtub, Single or Double sink, Washing Machine, Dishwasher or Bidet. A single Hep_vO may only be used to protect multiple fixtures under strictly defined conditions.

Hep_vO eliminates the need to have the fixture it is installed on individually vented (through the roof or anti-siphon venting).

In-line design.

Easy to install in confined spaces. Ideal for sinks, showers, and other fixtures including dishwashers and washing machines.

Features and Benefits:

- Polypropene material – lightweight and durable
- Replaces commonly used Tubular and Schedule 40 p-traps, air admittance valve and cleanout
- Enables space saving e.g. two thru one solution used in shower and bathroom sink
- Self-sealing silicon membrane ensures that this can remain dry and odourless and doesn't retain/clog up excess waste
- Installation: horizontal and vertical
- Won't fail due to siphonage, freezing or evaporation unlike other P Traps

BV1B/UB - 1 1/2"

Hep_vO

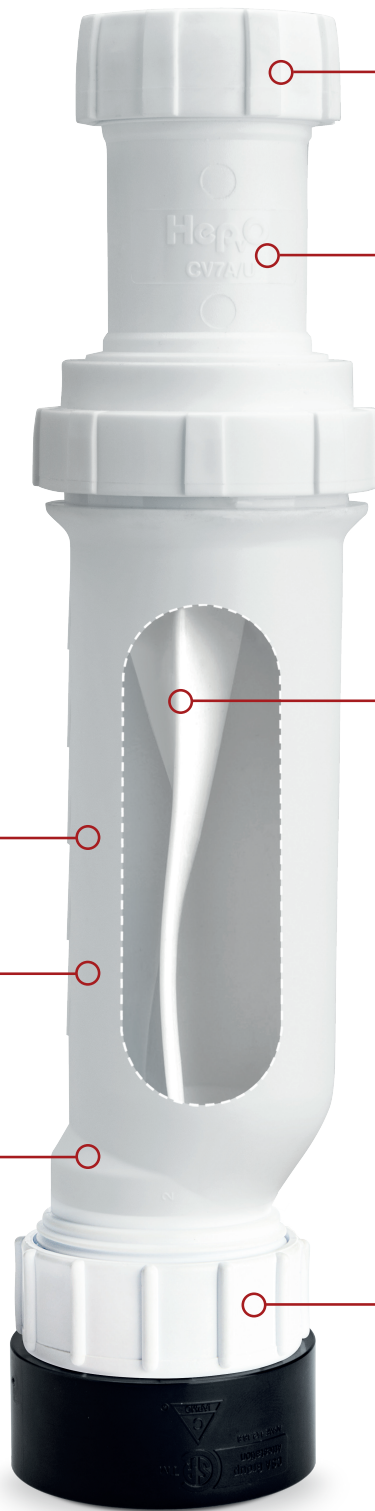

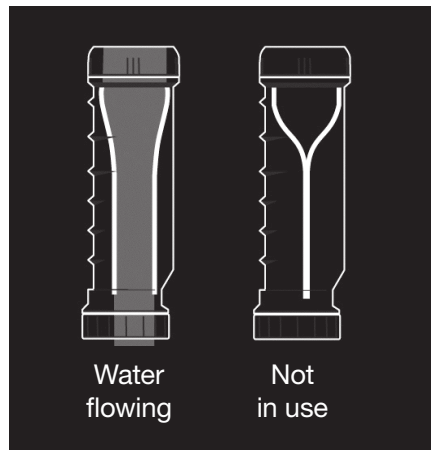

Waterless RV Trap

Stop foul odors from entering RVs.

Compact design means Hep_vO is ideal for installation in confined areas.

Silent operation - no gurgling.

Eliminates need for water seal. Therefore no evaporation or siphonage of trap.

1 1/4" or 1 1/2" In Line or Angled Adaptor with slip joint connection.

1 1/2" Threaded Connection to Fixture or Adaptors Supplied With Kit.

Prevents the escape of foul sewer air from waste discharge systems.

Actively maintains a pressure equilibrium in soil and waste installations.

Prevents waste water back-up into appliance.

SBV/U Hep_vO Outlet Various outlet options are available: Universal Slip Joint for 1 1/2" Tubular Pipe; or 1 1/2" Male Thread; or Socket for glued connection to ABS pipe.
